Subject: RE: SCoR extensions testing

Dear Gerry:

Up to now we did not get any commitment by Richard Jupe regarding the availability of model cigarettes to test the SCoR principle (for details see two e-mails just forwarded to you, originally sent to Richard and George). Accordingly we did not yet plan on these. However, we have open slots in fall to run the studies (Ames, cytotox, metals, chemistry) If the cigarettes are delivered in September we will be prepared to finish the studies (6 + 1 cigarette types, 2 smoking conditions, regular study design) experimentally this year and the last report should be delivered end of February 2004.

Kind regards,
Ewald

Subject: SCoR extensions testing

Hello, Ewald and Klaus-

I'm catching up on e-mail after being gone last week, and I see that I need some information for a meeting tomorrow (**Tuesday, April 8**). Richard Jupe is planning for "SCoR extensions" and wants to know when we could get testing done (in vitro, metals and chemistry) this fall (September timeframe). I spoke with Debbie and she said that Ewald should be familiar with the plan, as it was discussed at the meeting at the Jefferson recently. I hope that this is enough information to allow you to propose some times for testing and reporting. I do not know how many samples might be
